

NAMAA

Project Summary

Prepared content, current position, and next development step

CONCEPT DEVELOPMENT

Working and handover basis for Namaa leadership and the future specialist team
Documentation as at 2 August 2026 | Project Dossier 0.4

Purpose Develop safe, inclusive, additional learning and support opportunities for children in Syria.	Model Specialist development using knowledge in Germany and the diaspora, followed by accountable local delivery in Arabic.	Current maturity The concept and specialist handover are prepared. No specific programme or pilot is authorised.
---	---	--

CURRENT BOUNDARY
No authorisation for training, child contact, pilot delivery, software or AI development, funding commitments, or implementation.

Content basis: current Namaa documentation on GitHub main
Commit: c5be54f | Project Dossier 0.4 controls if another document differs.

Informative summary - not a professional, legal, regulatory, or operational clearance

What Namaa is about

Namaa is intended to become a family of professionally developed, safe, and inclusive learning and support programmes for children in Syria, complementing families, schools, professionals, public institutions, and existing organisations.

Starting point and working problem

EVIDENCE BASIS PREPARED

- The reviewed sources document substantial educational need, including out-of-school children, interrupted learning, damaged infrastructure, poverty, and return- and documentation-related barriers.
- Children with disabilities are among the groups facing particular exclusion; girls may face additional protection and participation barriers.
- Services already exist. Namaa therefore does not claim a complete absence of provision.
- The working concern is discontinuity across the support pathway: access, regular participation, completion, and appropriate educational connection are not reliably visible for every child.
- The general desk-research round is complete for the concept phase. No new general-needs study, standalone local-validation exercise, or target-group ranking is required before specialist development. A selected programme must still show specific added value and feasibility.

Long-term vision

Over time, as many children in need as responsible capacity allows should gain access to safe additional learning and support opportunities that strengthen capabilities, agency, future prospects, and quality of life.

Intended contribution

Namaa connects professional knowledge, suitable technology, and the experience of Syrians living in Germany with specialist programme development and accountable local delivery in Syria.

What is not claimed

- no current reach or demonstrated effectiveness
- no complete solution to Syria's education crisis
- no confirmed local implementation feasibility

WORKING HYPOTHESIS: A RELIABLE SUPPORT PATHWAY

Target groups and candidate programme fields

Namaa remains a modular programme family. For the first programme, the specialist team will define only the age, participant, eligibility, suitability, and inclusion frame required for safe design.

What has been prepared

The repository now provides a controlled concept package. Each group below retains its own status so that prepared material is not confused with final approval.

Conceptual foundation

ACCEPTED BASELINE

- Project Start 0.1 as the frozen starting record
- Project Dossier 0.4 as the authoritative current consolidation
- vision, working problem, target groups, objectives, boundaries, and decisions
- clear separation of concept, specialist development, and implementation

Research

DATED SNAPSHOT

- problem landscape, existing actors, and evidence boundaries
- reach, continuity, administrative, and technology constraints
- funding and support routes across Germany, the EU, the USA, and Gulf states
- open details explicitly marked as not verified

Programme and training preparation

PREPARED

- modular programme architecture and preferred playful design
- draft approach to selecting, assessing, and authorising trainers and facilitators
- remote-first model for adult training from Germany
- bounded specialist-team work package with a defined return package

Quality, safeguarding, and learning

PROVISIONALLY ACCEPTED

- programme quality framework with separate decision gates
- child safeguarding policy covering prevention, conduct, reporting, and response
- monitoring, evaluation, and learning framework for controlled pilot decisions
- international references without a certification or compliance claim

DOCUMENTATION POSITION

10 Markdown documents

form the structurally checked Namaa documentation set.

Dossier 0.4 controls

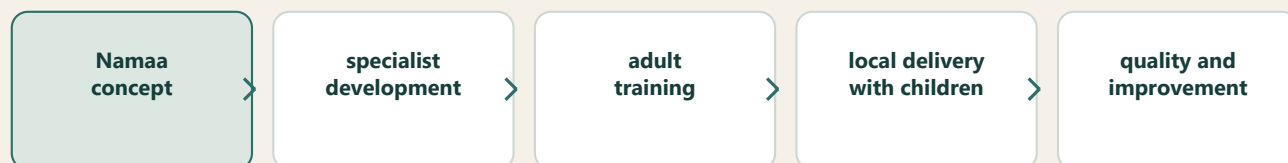

where a historical or supporting document differs.

Status remains separate

Prepared does not mean authorised, implemented, or effective.

Development model and roles

AGREED DEVELOPMENT CHAIN

CURRENT: HANDOVER BASIS ACCEPTED - FORMAL TEAM ASSIGNMENT PENDING

YISA / Namaa leadership

Owns vision, scope, governance, safeguards, partners, funding, approvals, and public claims.

Boundary: Does not replace specialist or local authority.

Programme management

A professionally knowledgeable YISA member will coordinate the specialist interface and records.

Boundary: The individual and written appointment remain pending.

Specialist team

Develops the first programme, content, pedagogy, inclusion, training, and measurement.

Boundary: Composition, competence coverage, availability, conflicts, and formal assignment are not yet documented.

Syrian contextual review

Reviews Arabic, culture, educational context, feasibility, boundaries, and referral needs.

Boundary: Does not replace authority permission.

Teachers / facilitators

May later deliver only the approved version for which they were trained and assessed.

Boundary: No diagnosis, therapy, or safeguarding investigation.

Local implementation structure

Provides accountable coordination, safeguarding, supervision, referrals, venue, and permissions.

Boundary: No host or legal route has been selected.

TRAINERS BASED IN GERMANY - CURRENT PLANNING POSITION

The draft framework did not identify a general German state trainer licence required merely for the proposed free, non-formal adult training. Namaa must still verify subject competence, adult-learning ability, experience, language, safeguarding suitability, practical performance, and written role boundaries. Syrian permissions and the exact legal route remain implementation-specific open matters.

Quality, child safeguarding, and responsible measurement

The three frameworks are provisional working and specialist-review bases. They draw on INEE, CHS, Keeping Children Safe, UNICEF, IASC, CPMS, and OECD-DAC references.

SIX CORE PILLARS

Specialist ownership

Content and boundaries are owned by appropriately competent specialists.

Child safeguarding

Prevention, reporting, response, and explicit stop rules.

Inclusion

Accessibility and reasonable accommodations from the beginning.

Controlled content

Version, source, language, review, and changes remain traceable.

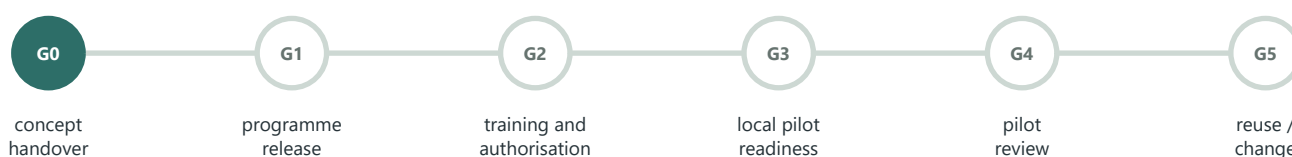

Competence before delivery

Training, practical assessment, authorisation, and support.

Honest evidence

Measure delivery and proximal outcomes while reporting limitations.

DECISION GATES: EACH GATE AUTHORIZES ONLY ITS SPECIFIC NEXT STEP

ONLY G0: HANDOVER BASIS ACCEPTED

Optional G0.5 applies only to separately authorised, tightly bounded child participation.

Child safeguarding

- draft policy not yet governing-body adopted
- named roles, reporting, and local referral routes
- risk-based recruitment, conduct, and supervision

Monitoring and learning

- access, participation, and delivery
- the specific competence taught
- continue, adapt, pause, or stop

Data, technology, and AI

- only data with a defined purpose
- low-tech and offline alternative
- no diagnosis or automated safeguarding decision

HARD STOP

No child contact, observation, real child data, or programme delivery while the required safeguarding, ethics, data, role, location, and permission evidence for the exact step is missing.

Funding and support pathways

The existing funding research is an official-source-based snapshot dated 21 July 2026. It is not a current funding strategy and was not live re-verified on 2 August.

REQUIRED BEFORE CONTACT OR APPLICATION

Re-check opening status, deadline, amount, eligibility, Syria coverage, partner rules, and payment feasibility using current official sources.

FIVE PATHWAYS RANKED AS MOST REALISTIC IN THE SNAPSHOT

PATHWAY	POSSIBLE ROLE FOR NAMAA	SNAPSHOT NOTE
The Pollination Project	Micro-start or a very small material or co-design test	Up to USD 500; Syria payment feasibility not verified
BMZ Small Projects Fund F10	A first substantive pilot with an independent local organisation	First applications generally up to EUR 10,000; partner and organisation evidence
startsocial	Organisational development, roles, impact management, funding, and partnerships	Consulting fellowship; not regular project cash
Stiftung RTL	Direct education, inclusion, health-literacy, or child-safeguarding work	Amount and specific Syria acceptance not verified
Erasmus+ KA220-YOU	European method and capacity development in a consortium	Larger consortium route; YISA realistically as a junior partner

Needed before a fundable pilot

- one selected and tightly defined first programme
- formal roles and documented specialist competence
- local host, permissions, and safeguarding system
- budget, banking and financial processes, and reliable partners
- programme-specific objectives, measurement, and a realistic timeline

Current funding position

- no funder selected
- no current eligibility confirmed
- no application submitted
- no budget or transfer approved
- funding pressure must not distort the programme

Current position and next step

What has been achieved

WORKING BASELINE

- Project Dossier 0.4 accepted as the working and specialist-handover baseline
- vision, working problem, target-group frame, and programme fields documented
- development, role, language, and health-content boundaries recorded
- general desk research closed for the current concept decision
- an initial group with education and child-support experience exists
- quality, safeguarding, and MEL foundations provisionally accepted
- specialist-team task and expected return package defined

Not achieved or authorised

NOT AUTHORISED

- no selected first programme, precise participant frame, or location
- no formal team assignment or complete competence mapping
- no curriculum, controlled Arabic materials, or training package
- no local host, permission route, or functioning referral plan
- no governing-body-adopted child safeguarding policy for operation
- no pilot, child contact, real child data, software, or AI use
- no funding, legal clearance, or demonstrated effectiveness

IMMEDIATE NEXT WORKFLOW

1. document roles and competence

2. formally assign the specialist team

3. request one bounded first-programme recommendation

4. leadership selects, revises, defers, or stops

5. only then develop the controlled programme package

Every later decision on training, partners, funding, technology, or a pilot follows only after review of the concrete programme package.

Core assignment for the specialist team

- recommend one coherent first programme
- define target age, participant profile, and added value
- design safe, inclusive, and practical delivery
- set one measurable short-term learning or support outcome
- prepare controlled content, training, and measurement

Stop or defer if

- suitable specialist ownership is unavailable
- responsible added value cannot be shown
- safeguarding or referral routes are not workable
- host, permission, or safe data arrangements are missing
- capacity cannot sustain regular quality assurance

**Namaa has a robust concept and specialist-handover basis.
It is ready for structured specialist development, not for delivery.**
